MOTO Workstation - No Top (Typical B2B Workpoint)

Independently Verified Product Carbon Footprint (PCF) Full Report

19 August 2026

Rebuilt

Table of Contents

Document overview

This Product Carbon Footprint (PCF) report provides a transparent and verified account of the greenhouse gas (GHG) emissions associated with MOTO Workstation - No Top (Typical B2B Workpoint).

This report has been prepared by the declaration owner using primary and secondary data. The report conforms to international standard ISO 14067 and it is compiled using a range of high quality data sources. The results of this report has been reviewed by a suitably qualified Rebuilt LCA professional and verified in accordance to ISO 14064-3. This report demonstrates the declaration owner's commitment to transparency, sustainability excellence and continuous improvement.

Users of this PCF are responsible for evaluating the applicability of the data for their intended purposes.

Benefits of using this Product Carbon Footprint

This document can be used to:

- Inform your customers about the embodied emissions in your products
- Meet procurement and tender requirements
- Identify hot spots and opportunities for making improvements in carbon intensity over time
- Input into mandatory corporate carbon disclosure reporting.

PCFs and EPDs: making comparisons

Product Carbon Footprints (PCFs) and Environmental Product Declarations (EPDs) are both based on ISO 14044 Life Cycle Assessment methodology.

The key distinction is scope:

- An EPD reports multiple environmental impact categories.
- A PCF reports greenhouse gas emissions only.

Because both apply the same methodological backbone, carbon results are technically interoperable when:

- The same lifecycle modules are included
- The same Product Category Rules are applied
- Functional performance are similar

Users should refer to the declared system boundary in this report before undertaking comparisons.

Results at a glance

MOTO Workstation - No Top (Typical B2B Workpoint)

District Australia Pty Ltd

Total upfront carbon
(A1-A3)

298.56 Carbon Footprint

Report information

Current version	Version 1
Publication date	August 19, 2026
Valid until	August 19, 2031
Independently verified	Declaration owner generated report Reviewed and verified by Rebuilt
Verifier contact	www.rebuilt.eco verified@rebuilt.eco
Geographic scope	This claim covers production in Australia
Goal of study	Holistic View, Innovation, Environmental Communication
Intended users	Architect / Engineer / Specifier
Data collection period	1 July 2024 - 30 June 2025
Standards compliance	ISO 14040, ISO 14044, ISO 14064-3, ISO 14067, ISO 14071
Product Category Rules (PCR)	EN 15804+A2:2019

Verification and Assurance

This Product Carbon Footprint has undergone:

- Automated validation checks for completeness and reasonableness
- Data Quality Healthcheck assessment
- Independent review by a qualified Life Cycle Assessment practitioner
- Risk-based assessment where material risks or outlier results were identified
- Verification aligned with ISO 14064-3

Verification constitutes limited assurance appropriate to carbon-only disclosure.

All documentary evidence provided by the declaration owner has been assessed and evaluated against EN 15804+A2 and PACT Framework v3 data quality requirements. Supporting documentation is retained and available upon request for audit or regulatory review.

This PCF report has been created and verified in accordance with:

ISO 14067 ISO 14064 GREENHOUSE GAS PROTOCOL International Standard on Sustainability Assurance ISSA 5000

Declaration owner

Declaration owner	District Australia Pty Ltd
Company description	-
Company location	Reservoir, Australia
Manufacturing facility	Melbourne District Warehouse
Manufacturing location	Reservoir, Australia

This document confirms that the Product Carbon Footprint presented in this report has been prepared and verified in accordance with recognised international standards for Life Cycle Assessment and carbon footprinting methodologies.

The assessment:

- Applies the principles and framework of ISO 14040 and ISO 14044
- Quantifies greenhouse gas emissions in accordance with ISO 14067
- Follows Product Category Rules EN 15804+A2:2019 where applicable
- Has been reviewed and verified in accordance with ISO 14064-3

The results represent the global warming potential (GWP) of the product for the lifecycle stages specified within this report. It does not constitute a multi-impact Environmental Product Declaration under ISO 14025.

Where lifecycle modules, Product Category Rules and system boundaries are equivalent, the GWP results disclosed in this report are methodologically aligned with those presented in Environmental Product Declarations.

Verification has been conducted by a qualified Life Cycle Assessment practitioner. The verification process includes review of documentary evidence, assessment of data quality and consistency, and evaluation of methodological conformance.

The level of assurance provided is limited assurance appropriate to carbon-only disclosure.

Supporting documentation and evidence are retained and may be made available for audit or regulatory review upon request.

Based on the provided evidence and data input by the declaration owner, the PCF has been reviewed to meet the requirements of ISO14067:2018 and we conclude that no evidence of non-conformance was observed during the review process, hence the PCF meets a limited level of assurance.

Product information

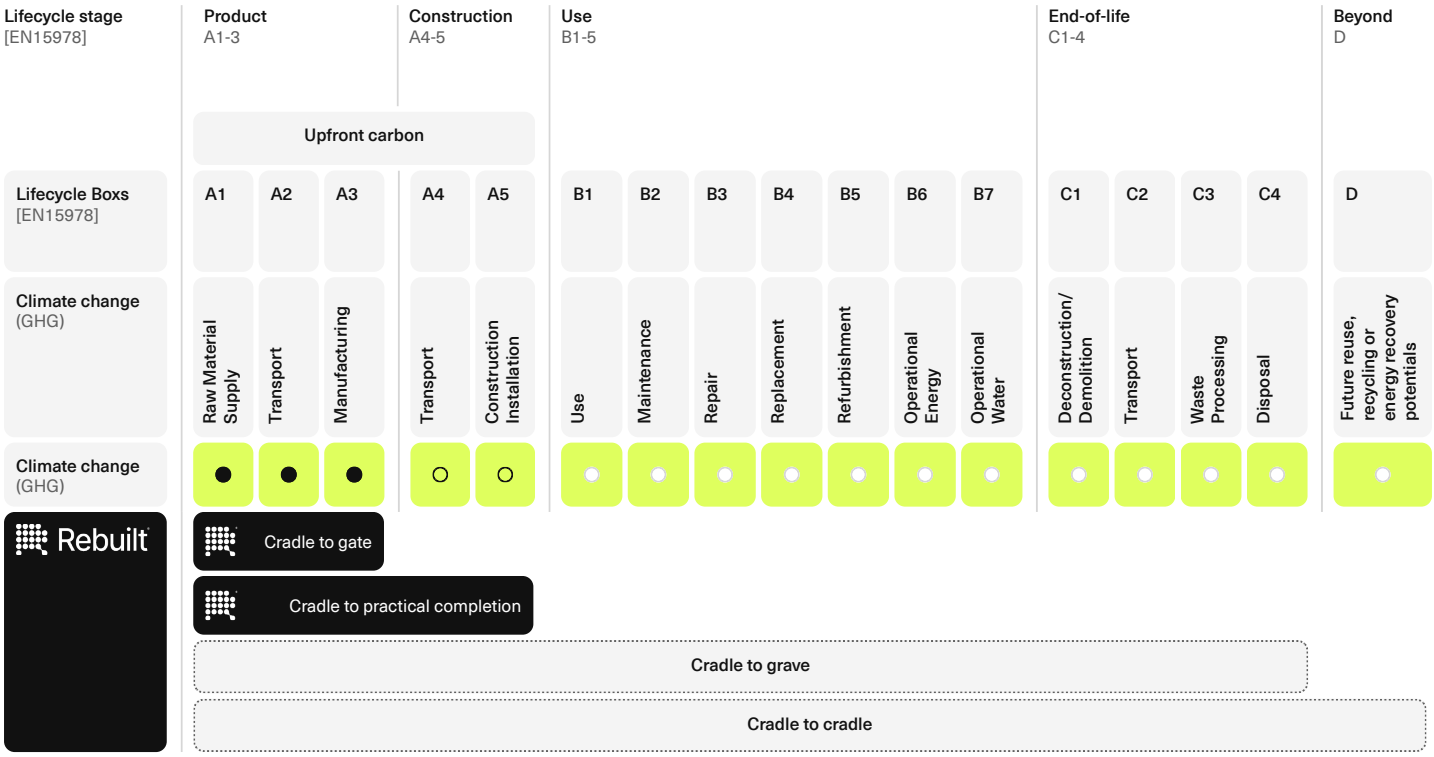
Product name	MOTO Workstation - No Top (Typical B2B Workpoint)
SKU	MOTO - B2B
Description	The MOTO Workstation by Elements is a height-adjustable workstation system designed for modularity, reconfiguration and extended service life. The system supports disassembly and component separation to facilitate repair, replacement and end-of-life material recovery. MOTO is GECA Level B certified and designed for disassembly, aligning with circular design principles. PCF System Boundary: This Product Carbon Footprint (PCF) covers 1 x back-to-back (2pax) powder-coated steel frame and electric height-adjustable mechanism, assembled at District's Perth or Melbourne warehouse. Screens, soft wiring and ancillary accessories are excluded from this assessment. Worksurface: Refer to MOTO Top Variant PCF's for worksurface options, which may be specified separately and are not included in this PCF.
Net weight (kg) per declared unit	60.83
Declared unit	1 unit For the purposes of this report, declared unit is taken to be an individual unit as sold.
Recycled content	0%
ANZSIC	4211
UNICLASS code	Pr_40_50_21_59

Technical information

Report boundary

This declaration shows the global warming potential (GWP) of the greenhouse gases embodied in this product, expressed in kilograms of carbon dioxide and equivalent gasses with global warming potential (kgCO2-e) and is based on the results of a pre-verified LCA performed in accordance with ISO14067 process and procedure as well as ISO14025 and nominated PCR EN15804.

NOTE: This declaration is limited to the life cycle stages shown in the table below.



A1 - Raw Material Extraction

The raw materials stage also called background or upstream covers the extraction and production of the raw materials needed to manufacture the product. It includes the processing of the extracted raw material to the point where it can be made into a recognisable part.

A2 - Transport Raw Material to Factory

This stage outlines the calculation of CO_2 emissions (Stage A2) for transporting raw materials to the factory. It considers transport modes, distances travelled, and material weights to calculate emissions.

A3 - Manufacturing

Converting raw materials into parts and made into the final product. It considers energy usage, packaging, process emissions and production waste.

A4 - Transport to Site

Not reported as part of this scope

A5 - Construction & Installation

Not reported as part of this scope

B - Use Phase

Not reported as part of this scope

C - End of Life

Not reported as part of this scope

D - Beyond

Not reported as part of this scope

Technical information (continued)

Exclusions from A5
Not reported as part of this scope

Cut-off criteria

Individual processes may be excluded if their contributions to the total system's environmental impact are less than 1%. The aggregate cut-off criteria of this PCF follows PCR 2019:14 guideline where a minimum of 95% of total input (mass and energy) for each life cycle stage are included. Exclusions from the PCF is outlined in "Data Assumptions, Choices and Limitations".

The use stage is excluded from the study due to the uncertainty related to the multiple possible applications of the products assessed.

The following processes were left out of the system boundaries, in conformity to usual practices in carbon footprinting: labor, commuting of workers and administrative work.

Allocation procedures

The allocation method for this PCF is based on a physical (mass) basis. The energy used by the product is allocated by normalising the total energy used in the factory to the total mass of the product to the total production mass output from the same factory.

Intended use of this PCF

This declaration is suitable for use in:
- NABERS Embodied Carbon Rating
- Green Star Responsible Products and Upfront Carbon credits
- Scope 3 reporting
- Australian Sustainability Reporting Standards (ASRS) contexts
- Government procurement sustainability requirements

Where a contract explicitly requires a Type III Environmental Product Declaration under ISO 14025, a full EPD may be required.
