Document overview

This Product Carbon Footprint (PCF) report provides a transparent and verified account of the greenhouse gas (GHG) emissions associated with Natural Grey Products.

This report has been prepared by the declaration owner using primary and secondary data. The report conforms to international standard ISO 14067 and it is compiled using a range of high quality data sources. The results of this report has been reviewed by a suitably qualified Rebuilt LCA professional and verified in accordance to ISO 14064-3. This report demonstrates the declaration owner's commitment to transparency, sustainability excellence and continuous improvement.

Users of this PCF are responsible for evaluating the applicability of the data for their intended purposes.

Benefits of using this Product Carbon Footprint

This document can be used to:

- Inform your customers about the embodied emissions in your products
- Meet procurement and tender requirements
- Identify hot spots and opportunities for making improvements in carbon intensity over time
- Input into mandatory corporate carbon disclosure reporting.

PCFs and EPDs: making comparisons

Both Product Carbon Footprints (PCFs) and Environmental Product Declarations (EPDs) are based on lifecycle assessment methodologies (ISO 14044), so their results are technically interoperable. However, comparisons should be approached with care:

- Data sources differ. Even within the same product category, PCFs and EPDs may draw on different reference datasets, assumptions, or cut-off rules, leading to variation in results.
- Rules matter. Results are only directly comparable if they apply the same Product Category Rules (PCRs), which set the boundaries and methods for assessment.
- Timing matters. PCFs and EPDs last for five years. Assessments carried out at different times may reflect changes in datasets, methodologies, or manufacturing processes.
- Lifecycle stages vary. Not all PCFs and EPDs cover the same modules (e.g. raw materials, manufacturing, transport, use, end-of-life). Different system boundaries can significantly affect results. Use the breakdown tables to compare like-for-like.
- Detail drives accuracy. Expert interpretation is often needed to judge whether results are genuinely comparable and to avoid misleading conclusions.
- Project context is key. The most meaningful comparison comes from assessing products in the context of the whole project or structure, not in isolation.

ISLAND BLOCK & PAVING

Total upfront carbon (Fossil)
(A1-A3)

104.15 Carbon Footprint
kg CO₂e /tonne

Carbon impact (Fossil)

Relative carbon impact of the components of the product

● Grey GP Cement ● 5mm Crusher Dust ● 10:30 Sand ● Stretch Wrap
● Sika Block - Plasticiser ● Reused Pallet ● Factory Energy

Component name	Weight (kg)	kg CO ₂ e	% of total kg CO ₂ e
10:30 Sand	458.63	3.46	3.32
5mm Crusher Dust	458.63	5.82	5.59
Grey GP Cement	82.55	86.44	83.00
Sika Block -- Plasticiser	0.18	0.32	0.31
Reused Pallet	0.60	0.21	0.20
Stretch Wrap	0.36	1.54	1.48
Factory Energy	0.00	6.36	6.11
	Total (kg)	Total (kg CO ₂ e)	
	1,000.96	104.15	

Carbon intensity by life cycle stage

Carbon impact from raw materials (A1), transport to factory (A2), production activities (A3), transport to site (A4), and installation (A5).

Type	A1 (kgCO ₂ e)	A2 (kgCO ₂ e)	A3 (kgCO ₂ e)
Fossil	88.05	4.09	12.01
Biogenic	0.04	0.00	-0.94
Luluc	< 0.01	0.00	< 0.01
	Total (kgCO ₂ e)	Total (kgCO ₂ e)	Total (kgCO ₂ e)
	88.09	4.09	11.07

Report information

Publication date	December 11, 2025
Valid until	December 11, 2030
Independently verified	Declaration owner generated report Reviewed and verified by Rebuilt
Verifier contact	www.rebuilt.eco verified@rebuilt.eco
Geographic scope	This claim covers production in Australia
Data collection period	1 July 2024 - 30 June 2025
Standards compliance	ISO 14040, ISO 14044, ISO 14064-3, ISO 14067, ISO 14071
Product Category Rules (PCR)	EN 15804+A2:2019

This PCF report has been created and verified in accordance with:

Company information

Declaration owner	ISLAND BLOCK & PAVING
Company description	Established in 1993, Island Block & Paving is a family-owned and operated company and proudly Australia's largest independently owned masonry manufacturer. Providing excellent product support and technical advice based on years of experience is our goal. Our slogan says it all – "No one knows Bricks, Blocks & Pavers better."
	We create high-quality, environmentally responsible products-crafted to endure, built for tomorrow. Our exclusive Sustainable Products for the Future range represent Australia's first Carbon Neutral and GreenRate Level A certified collection of Bricks, Blocks, Pavers and Retaining Walls. Transparency is important, all certificates are third-party verified annually by Global Greentag; one of the world's leading eco labels.
Company location	Perth, Australia
Manufacturing facility	IB&P
Manufacturing location	Perth, Australia

Product information

Product name	Natural Grey Products
SKU	Including , 10.01,10 series accessories,15.01,15.48, 15 series accessories,20.01,20.48, 20 series accessories,25.01,25.48,25 series accessories,30.48, 30 series accessories
Description	Natural Grey Masonry Block range 100mm series 150mm series 200mm series 250mm series 300mm series
Net weight (kg) per declared unit	1,000.00
Declared unit	1 tonne
	For the purposes of this report, declared unit is taken to be an individual unit as sold.
Recycled content	-
ANZSIC	2034
UNICLASS code	Pr_20_93_52_01

Technical information

Report boundary

This declaration shows the global warming potential (GWP) of the greenhouse gases embodied in this product, expressed in kilograms of carbon dioxide and equivalent gasses with global warming potential (kgCO₂-e) and is based on the results of a pre-verified LCA performed in accordance with ISO14067 process and procedure as well as ISO14025 and nominated PCR EN15804.

NOTE: This declaration is limited to the life cycle stages shown in the table below.

Lifecycle stage [EN15978]	Product A1-3		Construction A4-5		Use B1-5		End-of-life C1-4		Beyond D
Upfront carbon									
Lifecycle Boxes [EN15978]	A1	A2	A3	A4	A5	B1	B2	B3	B4
Climate change (GHG)	Raw Material Supply	Transport	Manufacturing	Transport	Construction Installation	Use	Maintenance	Repair	Replacement
Climate change (GHG)	●	●	●	○	○	●	●	●	●
 Cradle to gate									
 Cradle to practical completion									
Cradle to grave									
Cradle to cradle									
 Cradle to cradle									
 Future reuse, recycling or energy recovery potentials									

A1 - Raw Material Extraction

The raw materials stage also called background or upstream covers the extraction and production of the raw materials needed to manufacture the product. It includes the processing of the extracted raw material to the point where it can be made into a recognisable part.

A2 - Transport Raw Material to Factory

This stage outlines the calculation of CO₂ emissions (Stage A2) for transporting raw materials to the factory. It considers transport modes, distances travelled, and material weights to calculate emissions.

A3 - Manufacturing

Converting raw materials into parts and made into the final product. It considers energy usage, packaging, process emissions and production waste.

A4 - Transport to Site

Not reported as part of this scope

A5 - Construction & Installation

Not reported as part of this scope

B - Use Phase

Not reported as part of this scope

C - End of Life

Not reported as part of this scope

D - Beyond

Not reported as part of this scope

Technical information (continued)

Process flow diagram

Cut-off criteria

Individual processes may be excluded if their contributions to the total system's environmental impact are less than 1%. The aggregate cut-off criteria of this PCF follows PCR 2019:14 guideline where a minimum of 95% of total input (mass and energy) for each life cycle stage are included. Exclusions from the PCF is outlined in "Data Assumptions, Choices and Limitations".

The use stage is excluded from the study due to the uncertainty related to the multiple possible applications of the products assessed.

The following processes were left out of the system boundaries, in conformity to usual practices in carbon footprinting: labor, commuting of workers and administrative work.

Allocation procedures

The allocation method for this PCF is based on a physical (mass) basis. The energy used by the product is allocated by normalising the total energy used in the factory to the total mass of the product to the total production mass output from the same factory.
